

Order Coleoptera Linnaeus, 1758

Suborder Polyphaga Emery, 1886

Superfamily Staphylinoidea Latreille, 1802

Family Staphylinidae Latreille, 1802

Tribe Xantholinini Erichson, 1839

Genus **incertae sedis**

(Figure S1)

Placement of the fossil. The combination of characters visible in the fossil undoubtedly places it in the tribe Xantholinini: antennae geniculate, distance between antennal insertions never longer than the distance from antennal insertion to eye (Figure S1A); the neck is narrower than half the width of the head (Figure S1A, B); margins of elytra overlapping and thus not forming a straight suture (Figure S1C).

Formation. From Upper Cretaceous Burmese amber (ca. 99 Ma).

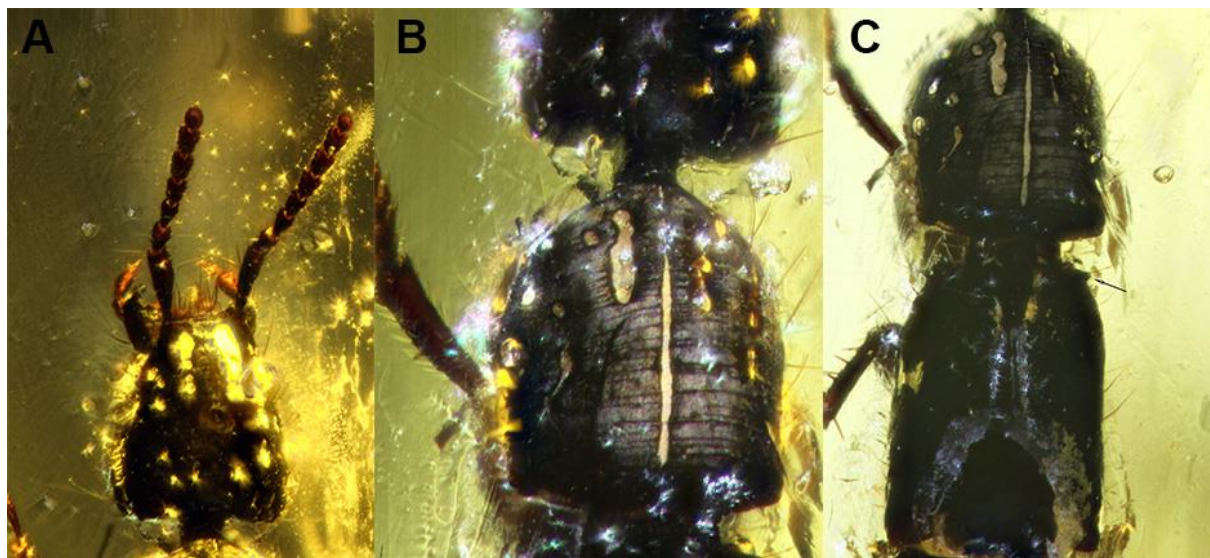

Figure S1. Xantholinini: genus **incertae sedis** from Upper Cretaceous Burmese amber (ca. 99 Ma). A. Head. B. Pronotum. C. Pronotum and elytra.
